The machine may be subject to change.

Compact, versatile and perfect for testing and sampling operations, the special extruder Bausano MD 30 is designed for those who need to analyse products and manage pilot tests in the laboratory on small quantities of material, with the aim of identifying solutions to be extended to the entire production.

Consisting of one or two inlets on a single barrel with side pressure probes, MD 30 allows you to process multiple materials with a single doser.

Equipped with wheels, the extruder can be easily moved and any inspection and cleaning operation is simple and fast, thanks to the wider degassing.

Moreover, the **Digital Extruder Control 4.0** allows:

- ⊕ monitoring all extrusion parameters in real time;
- ⊕ saving the configuration to the memory module;
- ⊕ programming the automatic synchronism for production, maintenance and diagnostics;
- ⊕ saving the selected parameters, upon request or at preset intervals.

TECHNICAL DATA

MD30/19

Motors	2x1.5 kW
Total installed power	11 kW

MD30/30

Motors	2x1.5 kW
Total installed power	12 kW

Data may vary according to design specifications.
